NEVADA CON. NOW

Company Making Fur Fly at Mine, Smelter and Milling Plant.

APRIL WILL FIND OUTPUT VERY HIGH

Ely Property Presents Steam Shovel Opening That Is Unexcelled.

The annual report of the Nevada Consolidated Copper company for the year closing September 30, 1208, contains a great many interesting facts relative to the condition of the mines and the financial shape of the organization. The balance sheet at the close of the year showed the following financial condition:

Capital stock, 1,500,000 shares \$ \$,000,000 Surplus, realized on sales of

Stock of other companies 4.845. Trusteed capital stock 3.954. Materials on hand 120, Ores in process of treatment 152, Accounts collectable 12.	2,994,000 178,153 109,176	Accounts
Stock of other companies 4.845, Trusteed capital stock 2.954, Materials on hand 120, Ores in process of treatment 152, Accounts collectable 12.	ies\$14,404,040	Total
	empanies 4,845,500 stock 2,954,000 d 120,638 of treatment 152,869 able 12,835	Stock of of Trusteed Materials Ores in pr Accounts

Total assets \$14,404.040

The trusteed stock is stock of the company held in trust to provide for the company held in trust to provide for the company held in trust to provide for the company and those of the Nevada Northesm railroad. The stocks owned include chares of the Steptoe Valley Smelting, the Cumberland-Ely Copper and the Nevada Northern Railroad company.

The report of James Phillips, Jr., president, says, in substance. For the final four months of this fiscal year your company has been, upon a constantly increasing scale, an actual producer and shipper of copper, and is today marketing the metal. From the data at hand, it may be accepted with conndence that in January, 1909, our monthly production will be at a rate equivalent to an annual production of at least \$5,000,000 pounds, and that by April next, when the additions to the concentrating and smelling plant now under way are completed, the increased facilities will result in raising our annual output to \$5,000,000 or \$5,000,000 pounds of copper. Should still another unit be added to our plant it is well within the range of probability that by September next year your company will take its place as one of the six largest copper producing companies of the world.

"A year ago your consulting engineer roported that the actual tonnage blocked out in the Eureka and the Ruth groups then aggregated 14,432,852 tons; to which total more than \$5,000,000 tons have been added by development operations during the current year. In view of the fact that only a small prition of the serious development of a financial panic and the delays incidental to prosecuting construction during two winters, lust eightern months elapsed between the turning of the first specion of your plant, and at this time the treatment of ore and the prod

have sufficient for operations many times greater than the capacity of the present plant. "Concerning the transportation facilities to your mines and to the several departments of the plant by the Nevada Northern, owned jointly with the Cumberland-Ely company, the railroad is thoroughly equipped and in successful operation.

thoroughly coulpped and in successful operation.
"It is the intention of your officers to supplement the annual reports from time to time, as existing circumstances warrant, with interim reports, treating not only of the progress of development and production at the company's mines and works, but also of the financial details of its operations. On April 1, 1998, the company issued on its property \$3,000,000 in 6 per cent first mortgage bands, convertible into stock, which were sold at par, and the proceeds are being used for the extension of the property and the development of the same."

HILLTOP DEAL IS OF MUCH INTEREST

Property Adjoining Group Just **Bought by Quealy Interests** Has Depth.

RICH ORE IN THE EIGHTY-FOOT SHAFT

Returned Visitor Says There Is Great Mineral Showing in Camp.

The action of P. J. Quealy, the well-known Wyoming coal man, and his Utah and eastern associates in picking up the Hilltop property, seventeen miles southeast of the town of Battle Mountain, Nev., has created no end of excitement, both in Salt Lake and Nevada. The camp, and the Hilltop property in particular, have been known for some time past locally, but those whose attention has been called to this locality realized that it would take good sized capital to whip the district into proper shape, and those who have interests there naturally are very well satisfied that the Quealy interests have secured the Hilltop group.

A well-known mining man said to a Tribune representative Tuesday:

"I was very much interested in this deal of Mr. Quealy and his associates. Not long ago I visited the camp which is known as the Hilltop country, and I made an inspection of the Hilltop group. There is a great mineral showing there, and I am not surprised that the width of the ledge, some sixty feet, ranges in gold from \$150 to \$5000 per ton. Of course this is so far a surface proposition, but next to the Hilltop is the Independence property, a shaft on this group being down seventy-five or eighty feet. They have ore in the bottom of this shaft that runs as high as \$600 gold per ton.

"It looks to me, therefore, as if depth can be searched for by the Hilltop, Independence and many other groups there with a great deal of confidence. It is easy to perceive that should the Hilltop group extend to any great depth, in anything like its present shape, the Quealy interests have succeeded in picking up about the biggest gold proposition that the state of Nevada affords. Salt Lake will watch the activity on this property with considerable interest."

TOOELE SMELTER IS A BUSY PROPOSITION

Line Will Begin the Coming Week.

The work of the engineers and surveyors at the site of the new independent smelting plant over in Tocole county is rapidly assuming shape, and during the coming week General Manager Repath expects the construction crews to be at the site in readiness for the task in hand. The company is now securing the needed supplies and lumber for the numerous temporary frame buildings that will be necessary for the accommodation of the forces employed during the winter menths. By the first of the new year, therefore, the grading work for the new railroad line will be well under way.

In the local offices of the company there is nothing but activity, the office rooms being filled with men poring over stacks of plans and specifications. It is through this office that work will be furnished for thousands of men during the next two or three years, and through which is to flow several millions of dollars for supplies, equipment and wages.

and wages.

Mining Notes.

Tony Jacobson, president and general manager of the Columbus mines, is at Alta. There will be a meeting today at noon in the Commercial clirb of the executive committee of the Utah Mine Operators' association, at which Mesars. Allen and Loose, the representatives of Utah before the house committee on ways and means at Washington, will give their report on their efforts to prevent the tariff on lead being removed.

GOLDFIELD CON. IS NEAR DIVIDEND DAY

Construction Work on Railroad Hayden, Stone & Co. Give Facts About Great Nevada Mine.

> Hayden, Stone & Co. have the follow ing relative to the Goldfield Consolidated company, whose stock recently has been a feature in the East and in San Francisco:

Francisco:

The new reduction works of the Goldfield Consolidated is practically in readiness, and already its bins are being supplied with ore, preparatory to its being placed in commission during the next ten days. It is not likely that a normal scale of production will be entered upon until the opening of the new year, when this company promises to at once lead the world's list of producers of the precious metal, both in the matter of bullion output and net earnings.

to at once lead the world's list of producers of the precious metal, both in the matter of bullion output and net earnings.

During the past year production has been confined to the Combination mine, from which net monthly earnings have been in the neighborhood of \$75,000. From the operation of the Combination mill, the company has secured ample data as to the costs in this department, with the result that a milling cost at the new reduction works of \$2.50 per ton is looked forward to, in addition to a cost for mining, development work, administration and transportation of \$3.50, or a total cost of \$6 per ton of ore treated.

The daily capacity of the new reduction works is 600 tons, and this volume will be supplied as follows: Red Top 125, Mohawk 350, Jumbo 50, and Combination 75 tons. The mines of this company contain close to eight miles of openings, and if necessary could supply double the daily tonnage contemplated in fact, the 600 tons daily could be easily supplied by the Mohawk alone. As an evidence of the wonderful wealth of the Mohawk, it may be stated that the average gold contents of the ore extending from the 350 to the 600-foot level, a depth of 400 feet on the angle of the vein, dip 35 degrees, is \$125 per ton, while the average of its center streak of eighteen inches is from \$250 to \$300 per ton, and also that a drift earried north from a point sixty-five feet from the bottom of the shaft, the point at which the winze was discontinued, disclosed average assay values of \$202 per ton for its full dimensions for its entire length of forty feet.

The Mohawk vein is not only stronger and more uniform at the 600-foot level depth, but its values are more evenly disseminated throughout the formation than any part of the mine, a fact deeply significant as indicating the persistency of values with increasing depth. The Mohawk vein will not be carried to further depth, but instead the ground beneath will be commanded by the Clermont shaft, which, during the next two weeks should cnt the Mohawk vein at the

add millions to the established value of the property.

Nothing is being overlooked towards conserving to the fullest extent the future life of the Goldfield Consolidated. In the equipment of the reduction works soon to go into commission, crushing capacity has been provided for 100 additional stamps, from which it is evident that the company ultimately, and it may be said before long, intends to increase the daily capacity of this plant to 1200 tons. The coming year will, in all probability, witness the installation of at least forty additional stamps, when the daily capacity will then have been increased to over 800 tons. The company has an immense tonnage of average grade ore which will show a handsome profit when handled on a large scale. In addition, the reduction works is more than likely to receive the smelting patronage of several of the Goldfield gradueers and this business. smelting patronage of several of the Goldfield producers, and this business should show very creditable returns. From the daily treatment of 600 tons, From the daily treatment of 600 tons, monthly earnings are looked forward to at the rate of \$500,000, equal to \$6,000,000 per annum, which volume will be probably increased to the extent of \$500,000 per year from the operation of the Combination mill, which is more than likely to be kept in commission until the new reduction works has been provided with greater capacity. There are thus indicated prospective annual earnings of about \$1.75 per ton on the company's 3,538,971 outstanding shares.
